

## ABSTRACT OF THE DISCLOSURE

An Internet boutique system is disclosed for  
5 displaying an image of a user in combination with the  
image of a commodity to allow the user to determine  
whether the commodity will fit the user or not. The  
Internet boutique system has a user image manager and a  
coordination processor. The user image manager acquires  
10 the image of the user from an image capture device and  
registers the acquired image of the user in a user image  
database. Then, the coordination processor prompts the  
user to select a commodity type. When a commodity type  
is selected, the coordination processor acquires the  
15 images of commodities of the selected type from a server  
and displays the acquired images of commodities from  
which the user chooses the image of a desired commodity.  
The selected image is displayed in combination with the  
image of the user at a suitable position thereon. The  
20 user registers the commodity determined to be purchased  
in a purchased commodity database.
